

## Hall Effect Linear Sensor

### Introduction

SLSS39E Linear Hall-effect sensor is small, versatile device that is operated by the magnetic field from a permanent magnet. The linear sourcing output voltage is set by the supply voltage and varies in proportion to the strength of the magnetic field. The integrated circuitry features low noise output, which makes it unnecessary to use external filtering. The sensor Interfaces with many electrical components without buffering. It includes thin film resistors to provide increased temperature stability and accuracy.

The linear Hall-effect sensor has an operating temperature range of -40 °C to 150°C, appropriate for consumer, industrial and medical environments. The sensor is available in 2 package styles, which are T092 and SOT23.

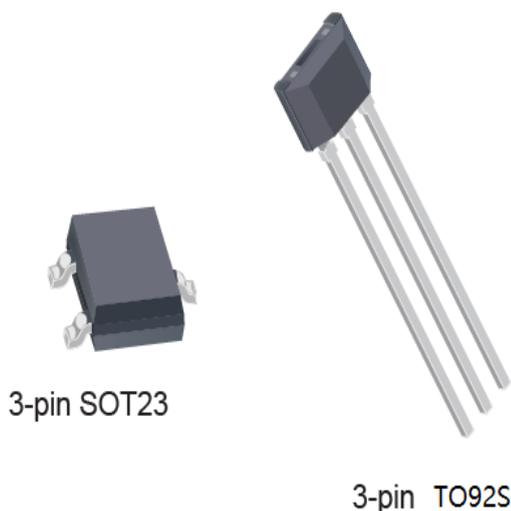

### Features

- Miniature construction
- Low current consumption of 5 mA at 5 Vdc
- Voltage range of 3 Vdc to 12 Vdc
- Low noise output
- Temperature range of -40 °C to 150 °C
- Highest ESD performance up to ±4 kV
- React differently to the Antarctic and Arctic magnetic fields

### Potential Applications

- Current sensing
- Motor control
- Position sensing
- Magnetic code reading
- Rotary encoder
- Ferrous metal detector
- Liquid level sensing
- Weight sensing

### Package

### Ordering information

Part number	Package	Packing	Ambient, T <sub>A</sub>
SLSS39E-9	TO92S	Bulk, 1000 pieces/bag	-40°C to 150°C
SLSS39E-3	SOT23	Tape&Reel, 3000 pieces/reel	-40°C to 150°C

### Pin assignment

Pin number	Name	Function
1	VDD	Power supply
2	GND	Ground
3	Vout	Output

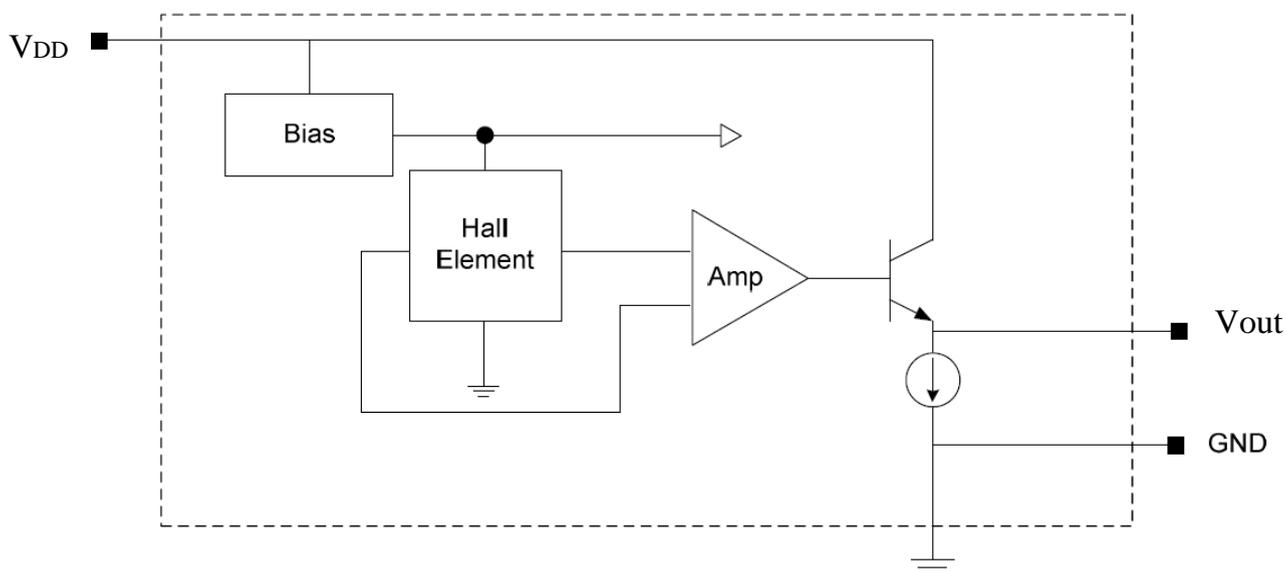

### Absolute Maximum Ratings

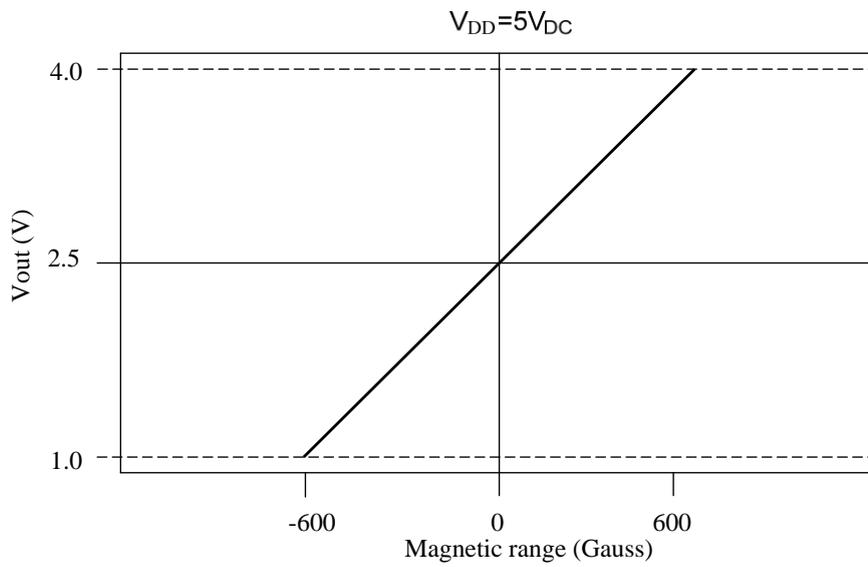

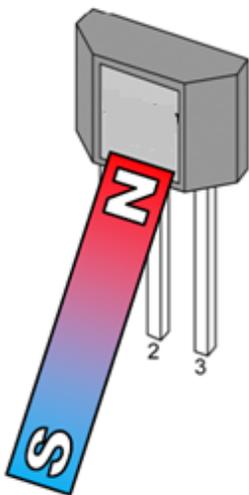

The absolute maximum value is the limiting value when the chip is applied, above which the chip can be damaged. Although the function of the chip is not necessarily damaged when the absolute maximum value is exceeded, the reliability of the chip may be affected if the absolute maximum value is exceeded for a certain time.
